1. In a project process a lot of data and artefacts are used and created (like poster overviews, post-its, papers or mock-ups/sketches). Dig for six artefacts and related methods of one of your projects. Choose the artefacts which represent the process the best or which influenced it the most. Document your findings by taking pictures or making sketches or prints of the artefacts, methods can just be named. Find the right place on the given excavation map and dig them in the excavation site. (Private or secret artefacts can be paraphrased with tags.)

2. Which part of the process was most difficult? In which case had a technical device been helpful? Describe the missed devices as a query for google and stick them into to excavation map. (Use the given google stickers placed in the envelope.)
